# Perfection comes from the details. Visign actuating panels from Viega.

Colours, light and furnishings give a room its face. However, it is the details that give it character. Details such as the Visign actuating panels from Viega.

The design, exclusive and yet discreet, opens up unlimited creative leeway. The technology in the background ensures the highest level of operating comfort. The sum of the properties creates a perfect detail from a functional product.

## Level

Flush-mounted installation – for the contemporary unity of space and actuation.

Functional unit for  
natural stone panel

## Level: the flush-mounted actuator.

Good design does not have to be conspicuous to look nice. The flush-mounted variations of Visign actuating panels prove this. With the exception of the round-cornered designs, all actuating panels of the Visign for More and Visign for Style ranges can be installed in such a way that they create an absolutely flat surface with the wall. Only the push buttons stand out from the wall. Therefore the actuating panels integrate harmoniously into the surrounding tiling.

This is made possible through an installation frame, which can be adjusted effortlessly to different tile thicknesses. And also: The exclusive natural stone functional unit for the Visign for Style 12 even allows the tiles to be installed flush as the actuating panel. This means a stone surface or similar extraordinary material can be used throughout the bathroom design.

## Touchless: Visign for More sensitive.

Experience the advantage of an flush: perfect hygiene, no fingerprints and an absolutely flat, low-maintenance surface. Simply waving your hand is enough to trigger either a small or large flush volume. This creates uncompromising comfort, with a considerable water saving effect to boot, as it is confirmed by the WELL Label.

The Visign for More sensitive actuating panels are particularly discreet. Because of the electronic activation, there is no need for protruding push buttons. The installation height of the actuating panel on the wall is just 7 mm. The glass lends lightness and brilliance in addition.

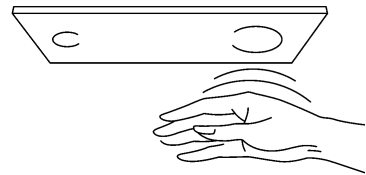

The colour code of the WELL Label shows how efficiently the water consumption is controlled by the fittings. Visign for More sensitive – actuating panels from Viega achieve the best values here.

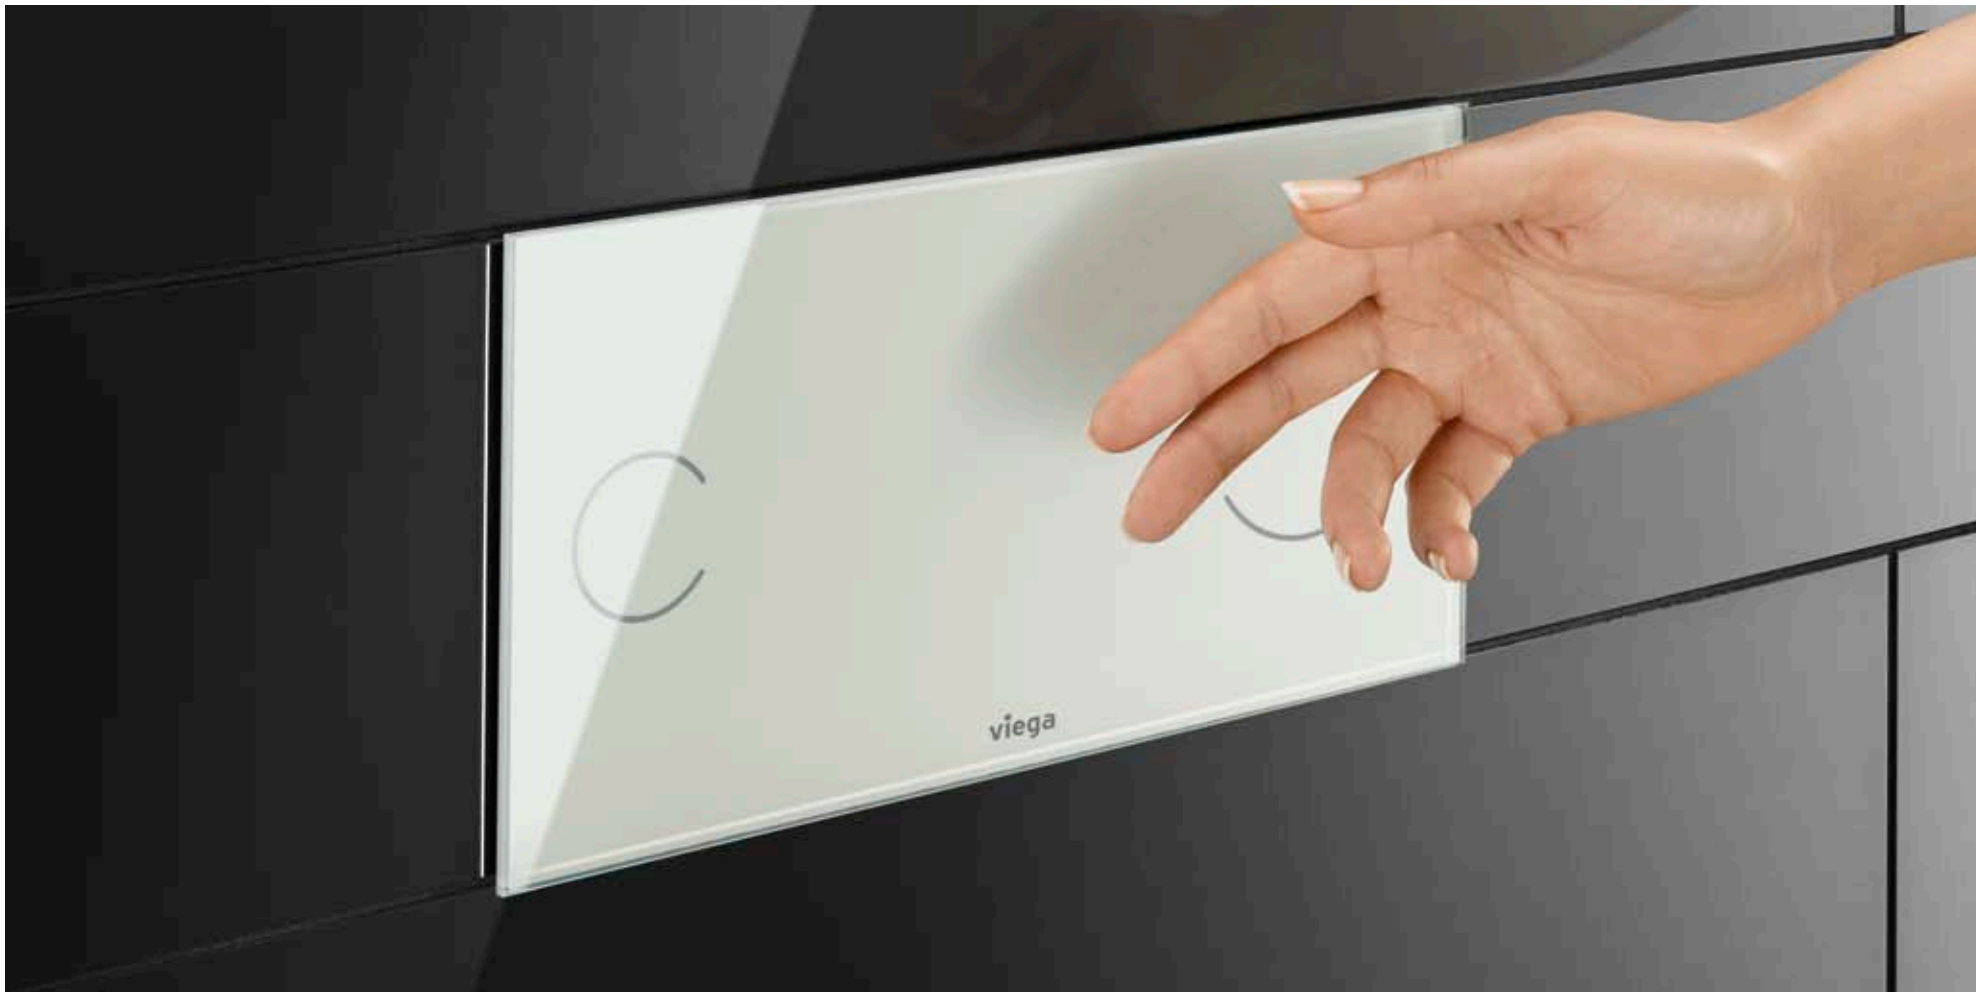

### Visign for More 100 sensitive

Round actuation areas form a graphical contrast to the straight contour of these actuating panels. This reduced design language also continues with the urinal actuator using infrared technology.

### Visign for More 103 sensitive

With soft contours and round actuation areas, the Visign for More 103 integrates perfectly into organic bathroom compositions. The urinal actuating panel in this range also is equipped with infrared technology.

## **Luxurious: Visign for More.**

In your bathroom ensemble, there is lots of space except for compromise. For this reason, Visign for More focuses on perfection in all matters: from the design by the renowned design studio Artefakt, through to the modern technology and high-quality materials such as metal and glass. In this way, each Visign for More actuating panel fulfils the highest demands on aesthetics and operating comfort.

## Visign for More 100.

The floating appearance and the smooth, flat surface lend the Visign for More 100 a special lightness. A light press on the panel triggers the flush.

- rear cover plate can be mounted flush with the surface
- smooth dual-volume flush technology using a Bowden wire unit
- also available as a touchless actuating panel Visign for More 100 sensitive

## Visign for More 101.

From high-quality materials and clear line management comes contemporary design. The Visign for More 101 proves this particularly impressively with its reduced design. The buttons of the WC actuating panel, which are arranged on top of each other, control the large and small flush volume.

- back cover panel can be mounted flush with the surface
- smooth dual-volume flush technology using a Bowden wire unit
- suitable for urinal actuating panel Visign for More 100

## Visign for More 102.

The classic push panel of the Visign for More 102 seems to float in front of the background – an effect which has additional appeal due to the combination of different materials with glass.

- can be mounted flush with the surface
- smooth dual-volume flush technology using a Bowden wire unit

## Visign for More 103.

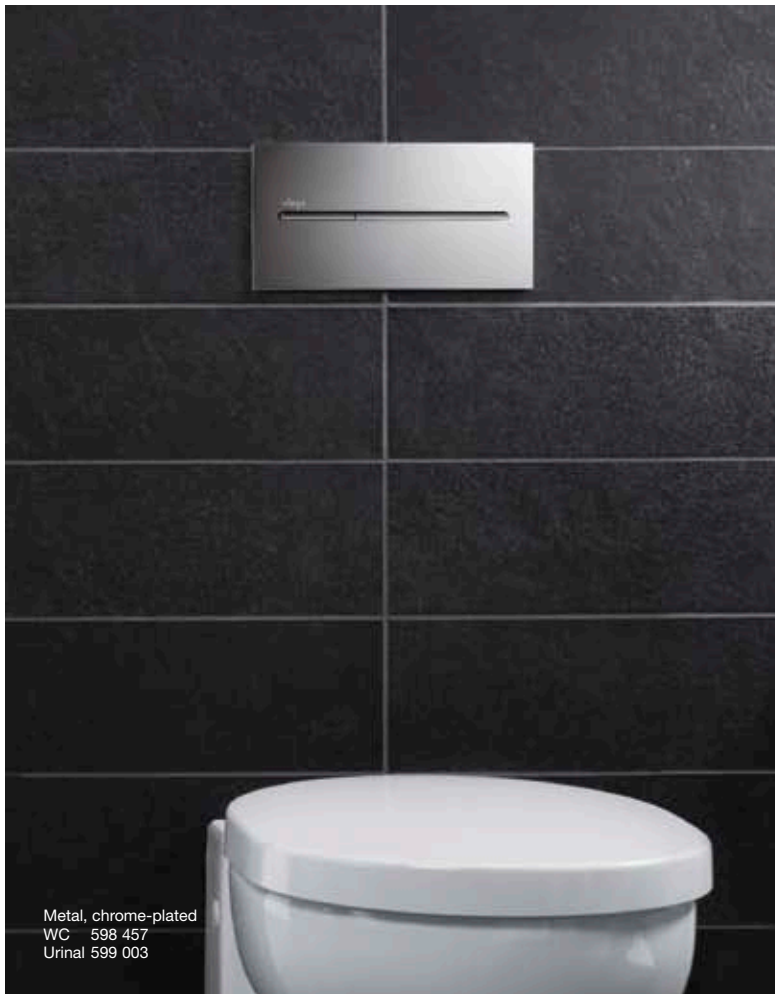

Discreet curves lend this actuating panel softer contours. Consequently, the Visign for More 103 is completely in trend – and offers an attractive variation to the straightness of the Visign for More 102.

- smooth dual-volume flush technology using a Bowden wire unit
- also available as touchless actuating panel Visign for More 103 sensitive

## Visign for More 104.

The design classic from the Viega Visign series is appealing with its high-quality materials and a reduced design language. The striking design of the Visign for More 104 also continues design with the Visign Multiplex Trio MT3 bathtub fitting and blends well with the timeless products of many fittings manufacturers.

- can be mounted flush with the surface
- smooth dual-volume flush technology using a Bowden wire unit

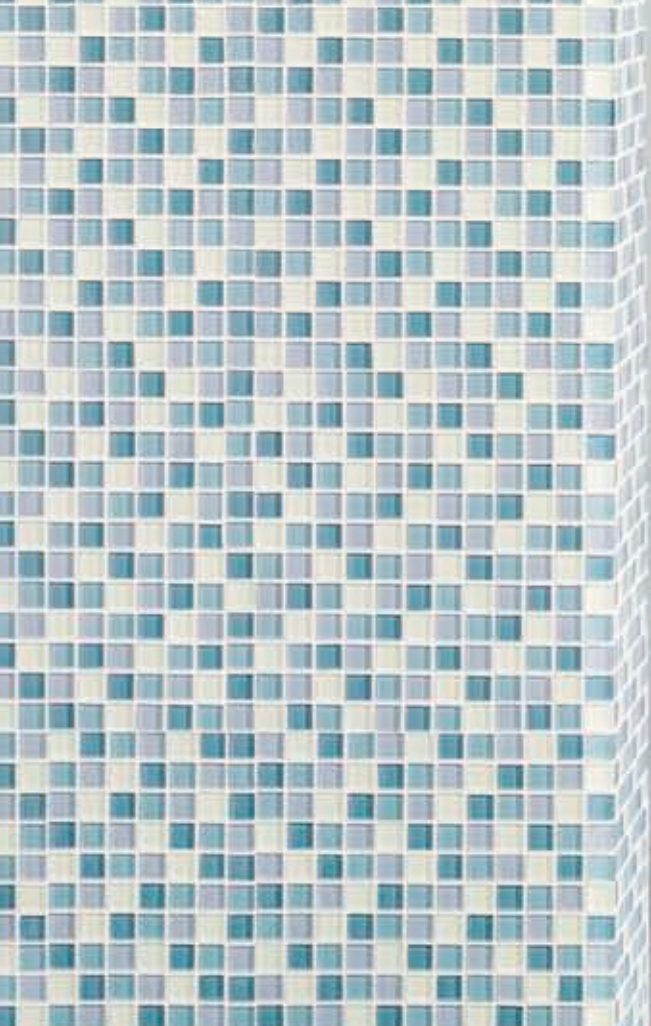

viega

## Puristic: Visign for Style.

Be it in the family bathroom or in a semi-public sanitary area – the actuating panels of the Visign for Style series are not just inspiring as a result of their operating comfort and reliable quality. They also set refreshing accents in the bathroom, proving along the way that perfection does not have to be a luxury.

## Visign for Style 10.

The Visign for Style 10 is convincing by its design and, above all, its haptics. The differently curved actuating buttons for the dual-volume flush technology are really pleasant to the touch.

- can be mounted flush with the surface
- mechanical dual-volume flush technology

## Visign for Style 13.

Form follows function – this design principle from design and architecture also forms the basis for the Visign for Style 13. The actuating panel consistently focuses on the two-part pressure point as the centre of its design.

- can be mounted flush with the surface
- mechanical dual-volume flush technology
